

## Contattori Contactors

090

[www.shhangou.com](http://www.shhangou.com)

La NEW ELFIN propone una nuova linea di contattori caratterizzati da una estrema modularità. L'ampia gamma di accessori in comune alle differenti taglie di potenza permette di gestire il lavoro in modo più funzionale e ottimizzare i costi al contrario di quanto l'offerta del mercato può mantenere.

*NEW ELFIN proposes a new line of contactors, characterized by an exceptional modularity. The wide range of accessories in common among different power sizes, allow you to work in a more functional way optimizing costs and time.*

rac-

-

rac-

Thanks to the very compact **dimensions** of the contactors installation procedure is very easy, even in particularly difficult situations. The operator responsible for their installation will gain huge benefits during both design and implementation phases.

A parità di serie i relè hanno un **prezzo** comune per favorire una più snella gestione degli acquisti. Una opportunità da non sotto valutare facendo riferimento in particolare al range di prezzi offerti attualmente dal mercato.

*Relays in series of the same level **cost** the same, in order to streamline the management of purchases. This is an opportunity to be taken into serious consideration, making particular reference to the price range currently offered by the market.*

L'installazione dei contattori e la sostituzione della bobina sono estremamente semplici e non necessitano di **utensili** per il montaggio.

*The contactors installation and the coils replacement are very easy operations and do not requires special tools.*

Contrariamente a quanto è richiesto ad altre tipologie di prodotti, per i contattori il **peso** è una qualità determinante. Infatti a maggior peso corrisponde una migliore efficienza e una garanzia di lunga operatività nel tempo.

*Unlike what is required by other types of products, **weight** is an important aspect for contactors, with greater weight corresponding to increased efficiency and long operational life.*

La **durata** nel tempo è fondamentale per garantire un flusso di lavoro costante ed un'ottimizzazione dell'investimento: i contattori NEW ELFIN garantiscono una media di 25 milioni di cicli come vita meccanica e 2,5 milioni come vita elettrica, queste caratteristiche pongono i nostri contattori al top della produzione mondiale.

**Duration** is fundamental in order to guarantee a constant work flow and optimise the investment: NEW ELFIN contactors guarantee an average of 25,000,000 cycles of mechanical life and 2,500,000 cycles of electrical life. These characteristics place our contactors at the top of the international production.

## INTRODUZIONE

La norma definisce il contattore come un dispositivo elettromeccanico di manovra, generalmente previsto per un numero elevato di manovre, avente una sola posizione di riposo, ad azionamento non manuale, in grado di stabilire, portare e interrompere correnti in condizioni normali del circuito, incluse le condizioni di sovraccarico e manovra. La forza per la chiusura dei contatti principali normalmente aperti o per l'apertura dei contatti normalmente chiusi è fornita da un elettromagnete. Nelle pagine a seguire trovete una serie di informazioni utili per ottimizzare la scelta del contattore necessario a risolvere il problema specifico di impiego.

### COME DIMENSIONARE UN CONTATTORE

Per effettuare il corretto dimensionamento di un contattore occorre tenere conto di alcuni fattori:

- categorie di utilizzazione che identificano la tipologia del carico
- della vita elettrica
- del numero di manovre/ora

La normativa stabilisce delle categorie di utilizzazione riferite ad impieghi ben precisi dei contattori.

Tali categorie sono riportate nella tabella seguente.

### CATEGORIE DI UTILIZZAZIONE DEI CONTATTORI

| CATEGORIE    | CORRENTE ALTERNATA  |                      | CORRENTE CONTINUA  |                      |
|--------------|---|----------------------|--|----------------------|
|              | CATEGORIE   | APPLICAZIONI TIPICHE | CATEGORIE  | APPLICAZIONI TIPICHE |
| <b>AC-1</b>  | Carichi non induttivi o debolmente induttivi, forniti a resistenza          | <b>DC-1</b>          | Carichi non induttivi o debolmente induttivi, forniti a resistenza   |                      |
| <b>AC-2</b>  | Motori ad anelli: avviamento, arresto                                       |                      |  |                      |
| <b>AC-3</b>  | Motori a gabbia: avviamento, arresto del motore durante la marcia           | <b>DC-3</b>          | Motori in derivazione: avviamento, frenatura in controcorrente, manovre a impulsi. Frenatura dinamica di motori in corrente continua |                      |
| <b>AC-4</b>  | Motori a gabbia: avviamento, frenatura in controcorrente, manovra a impulsi |                      |  |                      |
| <b>AC-5a</b> | Comando di lampade a scarica  | <b>DC-5</b>          | Motori in serie: avviamento, frenatura in controcorrente, manovre a impulsi. Frenatura dinamica di motori in corrente continua       |                      |
| <b>AC-5b</b> | Comando di lampade ad incandescenza   |                      |  |                      |
| <b>AC-6a</b> | Comando di trasformatori  |                      |  |                      |
| <b>AC-6b</b> | Comando di batterie di condensatori   |                      |  |                      |

### CATEGORIE DI UTILIZZAZIONE DEI CIRCUITI AUSILIARI

|              |  |              |   |
|--------------|--|--------------|---|
| <b>AC-12</b> | Comando di carichi ohmici e semiconduttori con opto separazione  | <b>DC-12</b> | Comando di carichi ohmici e semiconduttori con opto separazione                         |
| <b>AC-13</b> | Comando di semiconduttori con trasformatore di separazione   | <b>DC-13</b> | Comando di elettromagneti   |
| <b>AC-14</b> | Comando di piccoli carichi elettromagnetici (max 72 VA), quali bobine di piccoli conduttori o elettrovalvole | <b>DC-14</b> | Comando di carichi elettromagnetici con resistenza di risparmio sul circuito ausiliario |
| <b>AC-15</b> | Comando di carichi elettromagnetici (oltre 72 VA)  |              |   |

## INTRODUCTION

The standard describes the contactor as an electromechanical manoeuvring device, generally designed for a high number of operations, with just one idle position which is non-manually activated, capable of making carrying and breaking currents under normal circuit conditions, including overloading and operating conditions. The force required to close the main contacts which are normally open or to open contacts which are normally closed is supplied by an electromagnet. On the following pages you will find a series of useful information for choosing the best contactor for your specific requirements

### HOW TO DIMENSION A CONTACTOR

In order to correctly dimension a contactor, several factors have to be considered:

- the categories of use which identify the type of load
- the electrical life
- the number of operations per hour

### CONTACTORS UTILIZATION CATEGORIES

The standard establishes several categories of use referred to precise uses of contactors.

These categories are listed in the following table.

| CATEGORIES   | ALTERNATING CURRENT  |  | DIRECT CURRENT |   |
|--------------|--|--|----------------|---|
|              | TYPICAL APPLICATIONS   |  | CATEGORIES     | TYPICAL APPLICATIONS  |
| <b>AC-1</b>  | Non inductive or slightly inductive loads, resistance furnaces     |  | <b>DC-1</b>    | Non inductive or slightly inductive loads, resistance furnaces              |
| <b>AC-2</b>  | Slip-ring motors: starting and switching off                       |  |                |   |
| <b>AC-3</b>  | Squirrel cage motors: starting switching off motors during running |  | <b>DC-3</b>    | Shunt-motors: starting - plugging inching. Dynamic breaking of D.C. motors  |
| <b>AC-4</b>  | Squirrel cage motors: starting plugging - inching                  |  |                |   |
| <b>AC-5a</b> | Switching of electric discharge lamp controls                      |  | <b>DC-5</b>    | Series motors: starting - plugging - inching Dynamic braking of D.C. motors |
| <b>AC-5b</b> | Switching of incandescent lamps                                    |  |                |   |
| <b>AC-6a</b> | Switching of transformers  |  |                |   |
| <b>AC-6b</b> | Switching of capacitors banks                                      |  |                |   |

### SWITCHING ELEMENTS UTILIZATION CATEGORIES

|              |   |              |   |
|--------------|---|--------------|---|
| <b>AC-12</b> | Control of resistive loads and solid state loads with isolation by opto couples | <b>DC-12</b> | Control of resistive loads isolation by opto couples                  |
| <b>AC-13</b> | Control of solid state loads with transformer isolation                         | <b>DC-13</b> | Electromagnet control   |
| <b>AC-14</b> | Control of small electromagnetic loads (< 72 VA)                                | <b>DC-14</b> | Control of electromagnetic loads having economic resistors in circuit |
| <b>AC-15</b> | Control of electromagnetic loads (> 72 VA)                                      |              |   |

Contattori, relè termici, minicontattori, interruttori salvamotore  
*Contactors, thermal o/l relays, minicontactors, manual motor starters*

CATEGORIE D'IMPIEGO / UTILIZATION CATEGORIES

| Categoria / category | POTERI DI INSERZIONE E INTERRUZIONE  |                         |   |                         |
|----------------------|--------------------------------------|-------------------------|---|-------------------------|
|                      | Minimi / minimum (50 cicli / cycles) |                         | Ordinari / standard (6000 cicli / cycles) |                         |
|                      | Inserzione / making                  | Interruzione / breaking | Inserzione / making                       | Interruzione / breaking |
| <b>AC-1</b>          | 1,5 x In                             | 1,5 x In                | 1 x In                                    | 1 x In                  |
| <b>AC-2</b>          | 4 x In                               | 4 x In                  | 2 x In                                    | 2 x In                  |
| <b>AC-3</b>          | 10 x In                              | 8 x In                  | 2 x In                                    | 2 x In                  |

| <b>DC-5</b>          | 4 x In                               | 4 x In                  | 2,5 x In                                  | 2,5 x In                |

**AC-1**

Questa categoria prevede inserzione, mantenimento e disinserzione di una data corrente nominale. Quindi oltre al comando di carichi ohmici, questa categoria può essere utilizzata per carichi elettricamente equivalenti quali softstarters ed inverter (contattore di linea manovra a vuoto) e nella distribuzione di energia.

*This category provides for make, maintenance and break of a given nominal current. Therefore, in addition to the control of resistive loads, this category can be used for electrically equivalent loads, such as softstarters and inverters (no-load operation for line contactor) and to distribute power.*

**AC-2 - AC-3**

I contattori classificati in AC-3 possono essere utilizzati per occasionali manovre a impulso e/o frenature in controcorrente per brevi periodi (max. 5 op/min. e minore di 10 op/in10min).

*AC-3 Contactors classified in AC-3 can be used for occasional inching operations and/or plugging for short periods of time (max. 5 op./min. and less than 10 op./in 10 min.).*

**AC-4**

E' la categoria più gravosa in assoluto, infatti il contattore risultata estremamente sollecitato perché oltre a inserire la corrente di spunto deve anche interromperla.

*This is the most stressful category of all. The contactor undergoes tremendous stress as it is used both to make the initial current and to break it.*

#### COMANDO LAMPADE A FLUORESCENZA FLUORESCENT LAMP CONTROL

Nelle lampade a fluorescenza non rifasate la corrente d'inserzione è circa due volte la corrente nominale del circuito con tempi di accensione fino a 10s. Il contattore va scelto con Inom. in AC 1 moltiplicata per un fattore pari a 1,3 o 1,4. Nelle lampade a fluorescenza rifasate la presenza del condensatore riduce il tempo di accensione a pochi secondi ma si ha una corrente d'inserzione pari a 20 volte la corrente nominale del circuito a causa della carica del condensatore: il contattore deve essere pertanto scelto con una Inom in AC1  $\leq$  a  $20 \times$  Inom del circuito. Se la lampada è dotata di alimentatore elettronico per l'accensione la corrente d'inserzione è pari a 10 volte la corrente nominale del circuito con tempi d'accensione intorno a qualche secondo. Il contattore va scelto con Inom. in AC 1 moltiplicata per un fattore pari a 1.2 o 1.3.

*With fluorescent lamps where the power factor has not been corrected, the making current is about twice the nominal current of the circuit with starting times up to 10s. The contactor must be chosen with inom. in AC 1, multiplied by a factor of 1.3 or 1.4. With fluorescent lamps where the power factor has been corrected the presence of the capacitors reduces the starting time to a few seconds but has a making current which is 20 times the nominal current of the circuit due to the charge of the capacitors. The contactor must be  $\leq$  than  $20 \times$  inom circuit. If the lamp has an electronic feeder for starting up, the start current is 10 times the nominal current of the circuit with starting times of a few seconds. The contactor must be chosen with inom. in AC 1, multiplied by a factor of 1.2 or 1.3.*

### AC-5a

#### COMANDO LAMPADE A VAPORI DI MERCURIO MERCURY VAPOUR LAMP CONTROL

Nelle lampade non rifasate la corrente d'inserzione è circa due volte la corrente nominale del circuito con tempi di accensione fino a 5min. Il contattore va scelto con Inom. in AC 1 pari alla corrente d'inserzione. Nelle lampade rifasate si ha una corrente d'inserzione pari a 20 volte la corrente nominale del circuito e i tempi di accensione ridotti. Il contattore va scelto con Inom. in AC 1 tenendo conto che il potere di chiusura deve essere  $\geq$  a  $20 \times$  Inom circuito.

*With lamps where the power factor has not been corrected, the making current is about twice the nominal current of the circuit with starting times up to 5 minutes. The contactor must be chosen with inom. in AC 1, equal to the making current. With lamps where the power factor has been corrected, the start current is 20 times the nominal current of the circuit with reduced starting times. The contactor must be chosen with inom. in AC 1 considering that the closing power must be  $\geq$  than  $20 \times$  inom circuit.*

#### COMANDO LAMPADE A VAPORI DI SODIO SODIUM VAPOUR LAMP CONTROL

Sono lampade con tempi di accensione fino a 5min con una corrente d'inserzione pari a 1.7-2.2 volte la corrente nominale del circuito. Il contattore va scelto in AC 1 pari alla corrente d'inserzione.

Es.: Im circ. = 20A / I contattore = 20A \* 2.2 = 44A / 090C32 con 50A AC-1

These are lamps with starting times f up to 5 minutes with a start current of 1.7 - 2.2 times the nominal current of the circuit. The contactor must be chosen with inom. in AC 1, equal to the start current.

Es.: Im circ. = 20A / I contattore = 20A \* 2.2 = 44A / 090C32 with 50A AC-1

#### COMANDO LAMPADE AD INCANDESCENZA INCANDESCENT LAMP CONTROL

Queste lampade hanno una corrente d'inserzione di circa 15 volte la corrente nominale del circuito che si annulla dopo pochi millisecondi. Il picco è dovuto al brusco passaggio del filamento da freddo con altissima resistenza a caldo con bassissima resistenza. Il contattore va scelto con Inom in AC 1 e tenendo conto che il potere d'interruzione deve essere  $\geq$  alla corrente d'inserzione.

*These lamps have a making current which is about 15 times the nominal current of the circuit and which is cancelled after a few milliseconds. The peak is due to the sharp passage of the filament from cold with very high resistance to hot with very low resistance. The contactor must be chosen with inom. in AC 1 and taking into account that the breaking capacity must be  $\geq$  than the making current.*

#### COMANDO DI TRASFORMATORI TRANSFORMER CONTROL

L'inserzione di trasformatori è contraddistinta da un picco d'inserzione che può arrivare fino a  $30 \times$  In dovuto ad un elevato assorbimento di correnti magnetizzanti. Ovviamente nel dimensionamento del contattore occorre che il potere d'interruzione sia  $\geq$  alla corrente d'inserzione. Questa tabella è applicabile quando la corrente d'inserzione è inferiore a 20 In circuito.

*The connection of transformers is distinguished by a start peak which can reach  $30 \times$  In. due to high absorption of magnetising current. Obviously when dimensioning the contactor it is necessary for the breaking capacity to be  $\geq$  than the making current.*

**COMANDO DI  
CONDENSATORI  
CAPACITORS  
CONTROL**

L'utilizzo dei condensatori negli impianti di riasamento è caratterizzato da picchi di corrente che il carico capacitivo impone alla rete all'atto dell'inserzione. Si possono comandare condensatori singoli o batterie. Nel caso di più di una batteria di condensatori i singoli gradini vengono inseriti in parallelo uno con l'altro, si ha così una sorgente addizionale di energia dovuta al trasferimento di energia della batteria sotto tensione a quella messa in servizio.

Questo rappresenta un carico supplementare per il contattore. occorre prevedere quindi l'utilizzo di induttanze e resistenze per aumentare il carico ammissibile al contattore.

Le induttanze smorzano le sollecitazioni che nascono quando si inseriscono dei condensatori in parallelo ad altri già collegati in rete e carichi (inserimento a gradini). Le resistenze proteggono i contatti di potenza del contattore durante l'inserzione del condensatore garantendo la vita elettrica dei circuiti.

I contattori per comando di condensatori hanno una vita elettrica inferiore a quelli per il comando dei motori a causa del maggior consumo dei contatti di potenza dovuto all'interruzione di corrente altamente sfasata con  $\cos\phi$  tendenti a zero. Occorre quindi fare attenzione al picco di corrente durante l'inserzione.

*The use of capacitors in power factor correction systems is characterised by peaks of current which the capacitive charge imposes on the network when power is started. It is possible to control single capacitors or batteries of capacitors. In the case of more than one battery of capacitors to be connected separately, an additional source of power is created due to the transfer of power from the empowered battery to the one placed into service.*

*This represents a supplementary charge for the contactor, and it is therefore necessary to provide for the use of impedances and resistances to increase the contactor's admissible charge.*

*The impedances reduce the stress generated when condensers are connected parallel to others already connected to the network and charges (connected in steps). The resistances protect the contactor's power contacts during connection of the condenser, guaranteeing the electrical life of the circuits.*

# minicontattori minicontactors

## TRIPOLARI DI BASE

I minicontattori New Elfin vengono forniti con tre contatti di potenza ed un contatto ausiliario normalmente aperto (NO).

## STANDARD THREE POLE

New Elfin minicontactors are supplied as standard with three main pole and an auxiliary contact normally open (NO).

## QUATTRO TIPOLOGIE DI CONNESSIONE

I minicontattori sono disponibili con attacchi vite-serrafilo e pin a saldare per circuito stampato. Su richiesta sono disponibili cersioni con attacchi fast-on a cage-clamp.

## FOUR TYPE OF CONNECTIONS

Minicontactors are available with various connections screw, solder pins, fast-on and cage damps (on request).

## VERSATILITA' DI IMPIEGO

E' possibile trasformare un minicontattore standard in un circuito stampato con apposito kit accessorio. La stessa operazione è possibile anche per il contatto ausiliario laterale. E' inoltre possibile montare sul minicontattore per circuito stampato tutti gli accessori della versione standard (contatti ausiliari laterali e frontali, temporizzatore, interblocco meccanico, filtro RC e relè termico.)

## VERSATILITY UTILIZATION

*Customer can change a standard minicontactor into a solder pins version with a special kit. The same operation is possible for the side mounting auxiliary contact. Customer can fit on solder pin minicontactor all the accessories of standard version (auxiliary contacts, timer mechanical interlock, RC unit thermal O/L relay).*

## BOBINE DI ALIMENTAZIONE

Nella nuova gamma di minicontattori New Elfin è possibile gestire le bobine di alimentazione c.a. e c.c. come ricambio.

## COILS

*In our new range of minicontactors we can supply ac/dc coils as spare parts.*

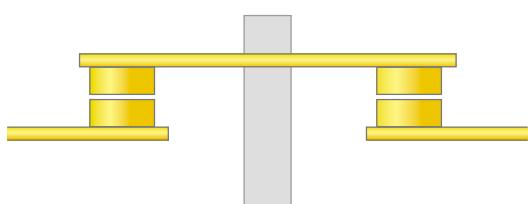

## TECNOLOGIA INNOVATIVA

La traslazione dei contatti di potenza è verticale. Questa tecnologia permette di avere una distanza maggiore tra contatti fissi e mobili rispetto ad una soluzione standard orizzontale aumentando potere d'interruzione e vita elettrica.

## INNOVATIVE TECHNOLOGY

*The translation of main contacts is vertical. With this solution minicontactors have a longer distance between fixed and moving contacts respect to a standard solution with horizontal translation. Making and breaking capacity and electrical life are longer than competitors.*

## GAMMA ESTESA

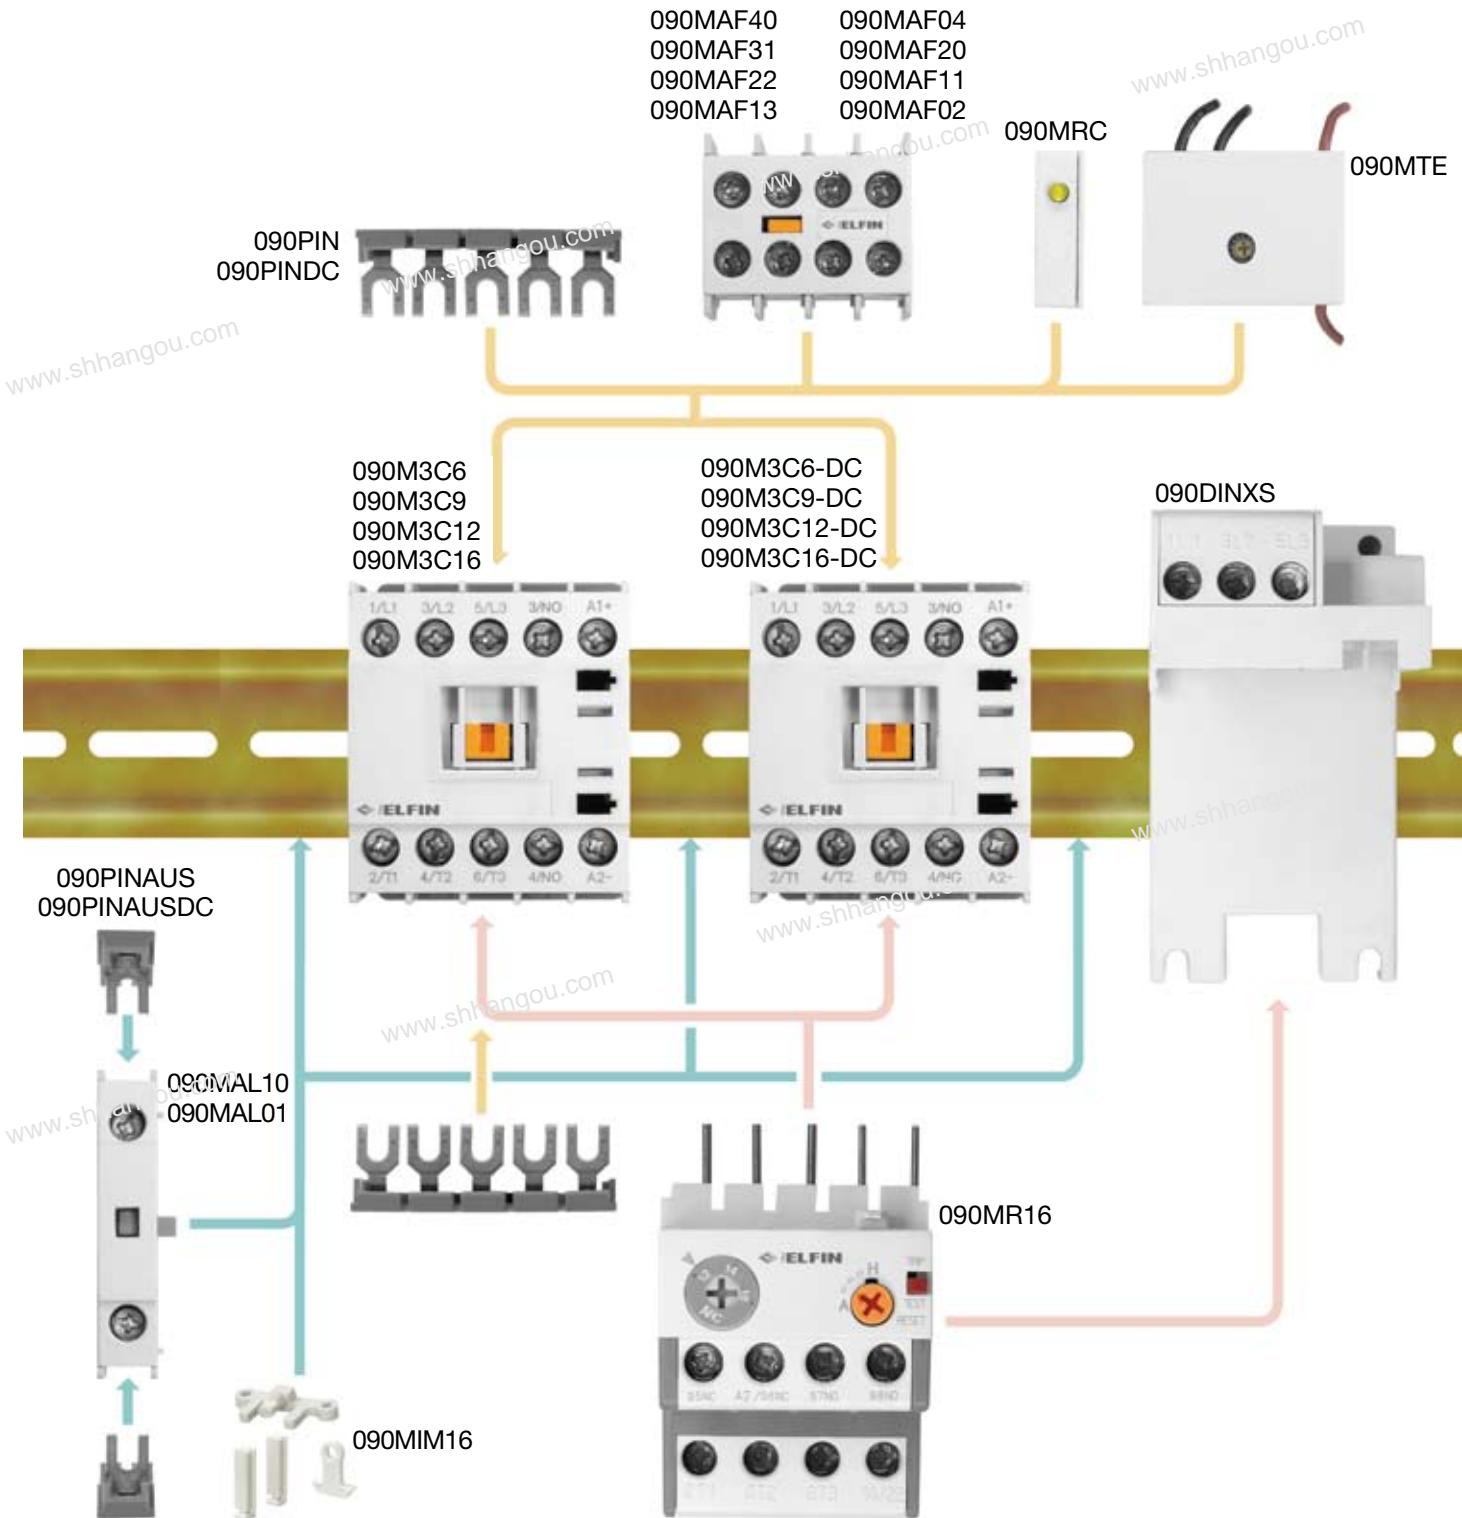

La gamma di minicontattori si estende fino a 16A 7.5Kw AC-3.

## WIDE RANGE

*Our range of minicontactors arrive up to 16A 7.5Kw AC-3.*

## LAY-OUT SERIE XSMALL - XSMALL SERIES LAY-OUT

## INTRODUZIONE

La norma definisce il contattore come un dispositivo elettromeccanico di manovra, generalmente previsto per un numero elevato di manovre, avente una sola posizione di riposo, ad azionamento non manuale, in grado di stabilire, portare e interrompere correnti in condizioni normali del circuito, incluse le condizioni di sovraccarico e manovra. La forza per la chiusura dei contatti principali normalmente aperti o per l'apertura dei contatti normalmente chiusi è fornita da un elettromagnete. Nelle pagine a seguire trovate una serie di informazioni utili per ottimizzare la scelta del contattore necessario a risolvere il problema specifico di impiego.

### COME DIMENSIONARE UN CONTATTORE

Per effettuare il corretto dimensionamento di un contattore occorre tenere conto di alcuni fattori:

- categorie di utilizzazione che identificano la tipologia del carico
- della vita elettrica
- del numero di manovre/ora

La normativa stabilisce delle categorie di utilizzazione riferite ad impieghi ben precisi dei contattori. Tali categorie sono riportate nella tabella seguente.

### CATEGORIE DI UTILIZZAZIONE DEI CONTATTORI

| CORRENTE ALTERNATA |   | CORRENTE CONTINUA |  |
|--------------------|---|-------------------|--|
| CATEGORIE          | APPLICAZIONI TIPICHE  | CATEGORIE         | APPLICAZIONI TIPICHE   |
| <b>AC-1</b>        | Carichi non induttivi o debolmente induttivi, forniti a resistenza          | <b>DC-1</b>       | Carichi non induttivi o debolmente induttivi, forniti a resistenza   |
| <b>AC-2</b>        | Motori ad anelli: avviamento, arresto                                       | <b>DC-3</b>       | Motori in derivazione: avviamento, frenatura in controcorrente, manovre a impulsi. Frenatura dinamica di motori in corrente continua |
| <b>AC-3</b>        | Motori a gabbia: avviamento, arresto del motore durante la marcia           |                   |  |
| <b>AC-4</b>        | Motori a gabbia: avviamento, frenatura in controcorrente, manovra a impulsi |                   |  |
| <b>AC-5a</b>       | Comando di lampade a scarica  | <b>DC-5</b>       | Motori in serie: avviamento, frenatura in controcorrente, manovre a impulsi. Frenatura dinamica di motori in corrente continua       |
| <b>AC-5b</b>       | Comando di lampade ad incandescenza   |                   |  |
| <b>AC-6a</b>       | Comando di trasformatori  |                   |  |
| <b>AC-6b</b>       | Comando di batterie di condensatori   |                   |  |

### CATEGORIE DI UTILIZZAZIONE DEI CIRCUITI AUSILIARI

|              |  |              |   |
|--------------|--|--------------|---|
| <b>AC-12</b> | Comando di carichi ohmici e semiconduttori con opto separazione  | <b>DC-12</b> | Comando di carichi ohmici e semiconduttori con opto separazione                         |
| <b>AC-13</b> | Comando di semiconduttori con trasformatore di separazione   | <b>DC-13</b> | Comando di elettromagneti   |
| <b>AC-14</b> | Comando di piccoli carichi elettromagnetici (max 72 VA), quali bobine di piccoli conduttori o elettrovalvole | <b>DC-14</b> | Comando di carichi elettromagnetici con resistenza di risparmio sul circuito ausiliario |
| <b>AC-15</b> | Comando di carichi elettromagnetici (oltre 72 VA)  |              |   |

## INTRODUCTION

The standard describes the contactor as an electromechanical manoeuvring device, generally designed for a high number of operations, with just one idle position which is non-manually activated, capable of making carrying and breaking currents under normal circuit conditions, including overloading and operating conditions. The force required to close the main contacts which are normally open or to open contacts which are normally closed is supplied by an electromagnet. On the following pages you will find a series of useful information for choosing the best contactor for your specific requirements

### HOW TO DIMENSION A CONTACTOR

In order to correctly dimension a contactor, several factors have to be considered:  
 - the categories of use which identify the type of load  
 - the electrical life  
 - the number of operations per hour

The standard establishes several categories of use referred to precise uses of contactors.

These categories are listed in the following table.

### CONTACTORS UTILIZATION CATEGORIES

| ALTERNATING CURRENT CATEGORIES TYPICAL APPLICATIONS |  | DIRECT CURRENT CATEGORIES TYPICAL APPLICATIONS |   |
|---|--|--|---|
| <b>AC-1</b>   | Non inductive or slightly inductive loads, resistance furnaces     | <b>DC-1</b>                                    | Non inductive or slightly inductive loads, resistance furnaces              |
| <b>AC-2</b>   | Slip-ring motors: starting and switching off                       |  |   |
| <b>AC-3</b>   | Squirrel cage motors: starting switching off motors during running | <b>DC-3</b>                                    | Shunt-motors: starting - plugging inching. Dynamic breaking of D.C. motors  |
| <b>AC-4</b>   | Squirrel cage motors: starting plugging - inching                  |  |   |
| <b>AC-5a</b>  | Switching of electric discharge lamp controls                      | <b>DC-5</b>                                    | Series motors: starting - plugging - inching Dynamic braking of D.C. motors |
| <b>AC-5b</b>  | Switching of incandescent lamps                                    |  |   |
| <b>AC-6a</b>  | Switching of transformers  |  |   |
| <b>AC-6b</b>  | Switching of capacitors banks                                      |  |   |

### SWITCHING ELEMENTS UTILIZATION CATEGORIES

|              |   |              |   |
|--------------|---|--------------|---|
| <b>AC-12</b> | Control of resistive loads and solid state loads with isolation by opto couples | <b>DC-12</b> | Control of resistive loads isolation by opto couples                  |
| <b>AC-13</b> | Control of solid state loads with transformer isolation                         | <b>DC-13</b> | Electromagnet control   |
| <b>AC-14</b> | Control of small electromagnetic loads (< 72 VA)                                | <b>DC-14</b> | Control of electromagnetic loads having economic resistors in circuit |
| <b>AC-15</b> | Control of electromagnetic loads (> 72 VA)                                      |              |   |

Contattori, relè termici, minicontattori, interruttori salvamotore  
Contactors, thermal o/l relays, minicontactors, manual motor starters
